In order to ensure data security, the Controller shall assess and record all data processing activities carried out by it.

On the basis of the records of processing activities, the Controller shall carry out a risk analysis to assess the conditions under which each processing operation is carried out and the risk factors that may cause a breach or a potential data protection incident during processing. The risk analysis shall be carried out on the basis of the actual data processing activity. The purpose of the risk analysis shall be to determine the security rules and measures that effectively ensure the adequate protection of personal data in accordance with the performance of the controller's activities.

The Controller shall implement appropriate technical and organisational measures to ensure and demonstrate that the processing of personal data is carried out in accordance with the GDPR, taking into account the nature, scope, context and purposes of the processing and the varying degrees of probability and severity of the risk to the rights and freedoms of natural persons. Only in this way can the Controller assess whether the new data is accurate and, if so, whether it can amend the previous data.

If it is not clear whether the data processed is correct or accurate, the Controller does not correct the data, but only marks it, i.e. indicates that the data subject has objected to it, but it may not be incorrect. The Controller shall, without undue delay, correct inaccurate personal data or supplement the data concerned by the request, after confirming the authenticity of the request. The Controller shall notify the data subject of the correction or marking.

The Controller further draws the attention of the data subject to the need to notify any change in his/her personal data as soon as possible, thus facilitating lawful processing and the exercise of his/her rights.
